Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis.

Claim 8; Page 616-617; 2188pp; English.

AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the Ξ

The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55990 represent specifically claimed S. epidermidis genomic DNA polynucleotide sequences from the present invention. AAH55091 to AAH55098 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 861 BP; 311 A; 123 C; 175 G; 252 T; 0 U;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQ ID NO:4455 to 4464

                                                                            В
                                                                                                                                                                                                                                   The invention describes a method of monitoring differential expression of CC genes in a first Bacillus cell relative to expression of the genes in CC other Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus CC genomic sequenced tags (GST), examining the array, and determining CC genemic sequenced tags (GST), examining the array, and determining CC genes in a first Bacillus cell relative to expression of the expression of genes in a first Bacillus cell relative to expression of the same genes CC in one or more second Bacillus cells. The method is useful for monitoring CC global expression of several genes from a Bacillus cell, discovering new CC genes, identifying possible functions of unknown open reading frames and CC monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way CC in which Bacillus cells adapt to changes in culture conditions, CC environmental stress or other physiological provocation. Extensive follow cup characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence tag (GST) used in the method CC of the invention. Note: The sequence data for this patent did not form CC part of the printed specification, but was obtained in electronic format CC directly from WIPO at ftp. wipo.int/pub/published_pct_sequences

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score
